¹ Also referred to as Cherokee Trail of Tears as well as a "forced-march" relocation. Geographic area of coverage comes from sources in Narrative document and map in Thornton (1990) from Morris, Goins and McReynolds ([1965] 1986:20), entitled "The Trail of Tears." Shows two Cherokee relocation routes from area encompassing north/northwest GA, southwest NC, southeast TN and northeast AL. One route is northwest through TN into KY, westward to southern IL, then down into southeastern MO, into northern Ark. and then westward into OK. Second route was westward through TN and AR to OK.

10. 1928 -- Sep 6-20, Great Okeechobee Hurricane/Flood, Southeast FL

"Natural" Top Ten (excluding Disease)

1. 1900 -- Sep 9, Hurricane, Galveston and southeast coastal area, TX --7.200-12,000 2. 1906 -- April 18, Earthquake, Fires, Landslides, San Francisco & vic., CA --3,000-5,000 3. 1936 -- Heat Wave (access deaths), July 1-31, especially Chicago, IL (2,696) --5,000 4. 1901 -- June-July, Heat waves, except Pacific NW, esp. ⁴ There were 2 deaths in AL and 2 in GA. The numbers reflect those generally reported. We note "≥" (at least) in that there still are over 100 missing and presumed dead, as well as unreported health-related indirect deaths.

"Man-Made" Top Ten – non-natural (though "nature" may be contributing factor)

1. 1540 -- Oct 18, Spanish (de Soto) battle/massacre, with Atahachi, Mabila, AL 2,500-6,000 2. 1838 -- May-Mar 1839, Cherokee Relocation, NE AL/NW GA/SE TN/NW NC to OK⁵ ~4,000 3. 1889 -- May 31, South Fork **Dam Fails**, Flash Flood, Fire, Johnstown PA 2,100-3,188 4. 2001 -- Sep 11, Violence, 9/11 Terrorist Attacks 3,064 5. 1941 -- Dec 07, Violence, Attack by Japanese on Pearl Harbor, HI 2,402 6. 1865 -- Apr 27, Steamer Sultana Explodes/Burns, MS Riv., Redman Point, AR 1,238-2,000 7. 2005 – Aug 29, Hurricane Katrina Levee/floodwall failures/overtopping, NOLA⁶ ~1,300 8. 1904 -- General Slocum Excursion Steamer Fire, Jun 15, East Ri., NYC, NY 957-1,204 9. 1675 -- Dec 19, English Colonists Massacre Narragansetts, Great Swamp, RI --365-1,100 10. 1915 -- July 24, S.S. Steamer Eastland Rolls-over in Dock, Chicago, IL --812-852

"Technological" Top Ten (thus excluding intentional man-made violence)

⁶ We show 1,833-1,836 Hurricane Katrina total deaths in FL, GA, AL, LA and MS – though the total number of deaths associated with Katrina will never really be known. Most of the deaths in Al and MS were from storm-surge. There were deaths related to evacuation as well as other causes. Most of the deaths in New Orleans, however, related to the failures of or overtopping of man-made structures. There were 1,577 reported deaths in Louisiana, including 1,300-1,400 in New Orleans, depending on the source. In order to be conservative we take the lower end of the range to represent lives lost due to the failures, breaches, and overtopping of man-made structures (levees and flood-walls).

⁸ Includes Forest/wildfires, fires from maritime events, structural fires and 911 terrorism event. Have used death toll for all types of death in the 1906 San Francisco earthquake, given uncertainty over range of deaths attributable solely to fire (burns, however, were the leading cause of death -- see 1906 SF Earthquake document.)

⁹ Cross-listed in Earthquake and in Landslides, in that there were a small number of deaths due to slides.

¹⁵ There were outbreaks elsewhere (see below). We note that our sources could not have had access to all cholera deaths in areas of coverage. Collins and Collins write in *History of Kentucky*, there were many more deaths in the smaller towns and the countryside than they were able to chronicle. This must have been true all up and down routes of river and rail traffic as well as in the wagon trains heading west during the Gold Rush. In addition, part of the explanation for the range has to do with what was called a death by cholera or a death caused by cholera-like symptoms, such as diarrhea or dysentery (interestingly co-incident in epidemic form during a cholera outbreak). ¹⁶ From contemporary accounts, it appears that the year 1833 was the deadliest.

¹⁷ Technically, what became the flu epidemic of early 1890 began in late December 1889.

¹⁸ This reflects zero Plains Native American deaths, whereas the range of cholera deaths amongst Plains natives in 1849 was 5,600-6,500. We believe that there must have significant loss of life, but have just not located sources.

¹⁹ As noted in the narrative description section, Shelburne Friend Cook in his *The Conflict Between the California Indian and White Civilization*, Part 4, 1976, p. 213, writes that the accounts he has before him giving estimates of 100,000, and 200,000 to 300,000, are "obviously wild guesses." His own guestimate (p. 214) is 2,000. We simply recognize the range. In another book in 1978 he writes that "the mortality may have reached 10,000."

²⁰ There is overlap with our 1863 entry (1,078 deaths) which includes Fort Delaware, Camp Chase, MD, and VA.

²¹ If our sources are accurate then there were at least 9,238 deaths. It is probable that other unrecorded (or unlocated by us) deaths occurred, especially amongst those fleeing from afflicted areas, as well as poor land laborers.

²² We note "greater than" 4,000 in that 4,000 is the estimated Comanche loss, whereas it has been written that the Kiowa, for example, lost to smallpox numbers in a ratio comparable to the Comanche.

²³ Also referred to as Cherokee Trail of Tears as well as a "forced-march" relocation. Geographic area of coverage comes from sources in Narrative document and map in Thornton (1990) from Morris, Goins and McReynolds ([1965] 1986:20), entitled "The Trail of Tears." Shows two Cherokee relocation routes from area encompassing north/northwest GA, southwest NC, southeast TN and northeast AL. One route is northwest through TN into KY, westward to southern IL, then down into southeastern MO, into northern Ark. and then westward into OK. Second route was westward through TN and AR to OK.

²⁴ Was in at least 10 Louisiana locations other than New Orleans; also in six known locations other than Vicksburg in Mississippi; was in Memphis, TN, and Brazos, Houston and Matamoras, Texas. Mostly late Summer and Fall.

²⁵ Based on death certificate data from 34 "registration states" as well as 17 cites in non-registration states of AL, GA, ND, OK, TX and WV, with an estimated population of 87,45,921 or 82.3% of total estimated U.S. and Hawaii territory population. AK was not a State. Other non-reporting states were AZ, AR, ID, IA, MN, NM, SD, and WY. ²⁶ Number is of sailor/soldier yellow fever deaths. We do not know number who were American, or how many Boston area residents died when the disease communicated to the town.

²⁷ The 1735-36 time-frame is essentially for NH and Kittery, ME, whereas the 1735-37 data is for Essex Co., Mass.

²⁸ Referred to as throat distemper, and other names at the time, descriptions point to what was later named diphtheria. Scarlet fever occurred as well, with deaths, but sources indicate the major epidemic was diphtheria.

²⁹ "Epidemic Cerebrospinal Meningitis," is the name used for this malady in U.S. Census, *Mortality Statistics 1931*.

³⁰ Many sources put fatality high-range at 1,500. Several sources put the high-range at 2,200 (Frank, 2003; Gess and Lutz, 2002, inside front cover), 2,400 (Hipke, 2008), or 2,500 (Gess and Lutz, 2002, p. 211).

³¹ We are assuming that if thousands died, then at least 2,000 must have died.

³² Our range is based on a State by State tally using best available sources which actually counted deaths. There are "estimates" for 1980 of 2,000-10,000 deaths, for which we find no explanation of how the estimates were made. We suspect they were based on looking at spikes in deaths during high heat, and attributing a percentage of the spikes to heat, at least as a contributing or aggravating factor. No doubt it is true that spikes in deaths during high heat can be associated with the heat. However, we seek to provide tallies based on counting, as opposed to estimating.

³³ There were 2 deaths in AL and 2 in GA. The numbers reflect these generally reported. We note "·" (et least) in

³³ There were 2 deaths in AL and 2 in GA. The numbers reflect those generally reported. We note "≥" (at least) in that there still are over 100 missing and presumed dead, as well as unreported health-related indirect deaths.

³⁵ Low-end of range is from Census Bureau and reflects death certificates listing heat as primary cause of death. High-end of range reflects results of Dept. of Public Health funded study of late Sep heat wave deaths in So. CA, in which 546 excess deaths above the norm were reported during 9-day "hot spell."

³⁷ The figure 115 refers to reporting by LA Coroner's Office of deaths directly attributable to the heat. The larger number is undoubtedly a compilation of the daily "above-the-norm" deaths (compared to the previous year) reported by the Coroner. At the beginning of the heatwave it was dozens higher than the previous year. At the end it was hundreds. Some source (which the four sources we cite copy) has apparently compiled those figures to obtain 946.

³⁸ These figures are based on a State by State tally using best available sources which actually counted deaths. There are "estimates" for this year of 5,000-10,000 deaths, for which we can find no explanation of how these estimates were made. We suspect this was based on looking at high spikes in deaths during the high heat, and attributing some percentage of the spikes to heat, at least as a contributing or aggravating factor. However, we seek to provide tallies based on counting, as opposed to estimating.

⁴⁰ In dispute – some place the massacre in Westchester County, NY (Dinan. "Historians Sift Clues..." *Greenwich Time*, 3-5-2006.)
⁴¹ See Nelson, Part 2 on why 317 fatalities is probably an undercount in Natchez. In addition, the "317" figure does not take account of what was described as hundreds (probably slaves) killed on the other side of the Mississippi River in Louisiana. This is why we are willing to consider higher estimates than 317 as real possibilities.

⁴² Based on death certificate data from 34 "registration states" as well as 17 cites in non-registration states of AL, GA, ND, OK, TX and WV, with an estimated population of 87,45,921 or 82.3% of total estimated U.S. and Hawaii territory population. AK was not a State. Other non-reporting states were AZ, AR, ID, IA, MN, NM, SD, and WY. ⁴³ There were deaths from and sinkings of multiple vessels. The loss of life on the Portland estimated at 127-192.
